

# Creating virtual scenes with A-Frame

## A-Frame Course I

## Section 2

Alberto Sanchez-Acedo

[doi.org/XXX/zenodo.XXX](https://doi.org/XXX/zenodo.XXX)

This work was supported by the Autonomous Community of Madrid (Spain) with a grant for industrial doctorates (IND2022/SOC-23503) with the collaboration agreement with Prodigioso Volcán S.L; Universidad Rey Juan Carlos (ID 501100007511).

## CREATING VIRTUAL SCENES WITH A-FRAME | A-FRAME COURSE I

In this course you will learn about A-Frame, an HTML-based framework that allows you to create Virtual Reality scenes and immersive web environments using the tool's own tags and components.

## Section 2

# A-Frame. Introducing the platform

## SECTION OBJECTIVES

- Introducing A-Frame
- Understanding HTML language
- Learn how to search for basic documentation on the A-Frame website
- Start working on a virtual project

# Sections points

1

2

3

4

## Section points

Click on each of the points to find out what we will be studying in this module.

# 1. Theoretical introduction A-Frame

Developed by Mozilla, A-Frame is an open source domain-specific language (DSL) for generating Virtual Reality content in the browser (Gill, 2017). A-Frame is an HTML-based framework that allows generating virtual environments and WebXR scenes by using HTML tags and A-Frame's own components.

The use of HTML tags allows to add elements such as basic geometries (box, sphere, plane...) to the virtual scene, as well as other components that we will see below.

In addition, we will explain how HTML tags are composed (tag, attribute, value) and how they are used to give properties to the elements and geometries of our virtual scene. Among these properties, you can work with the color, size, position or rotation of the elements.

A-Frame can be developed from an HTML file without having to install anything. In this course we will use the Glitch platform (<https://glitch.com/>), an online code editor that is hosted and deployed instantly and free of charge.

◉ **EXAMPLES DEVELOPED WITH A-FRAME**

To add new elements and more properties to components, JavaScript can be used. However, this course will not cover the use of JavaScript for the creation of basic virtual scenes.

## 2. HTML language

### 2.1. HTML structure

To develop our virtual scene we will use lines of HTML code (tag language).

The basic structure of an HTML code consists of the following tags:

`<!DOCTYPE html>`

`<html></html>`

`<head></head>`

`<body></body>`

HTML tags are composed of a name (html, body, head...) enclosed in angle brackets ("`<>`" and "`</>`").

The tags must always maintain the same order in the scene structure (as shown in the example). Between the opening and closing tags the necessary content (also in the form of tags) will be added to create the scene.

HTML tags are written with an opening and a closing tag.

Opening tags

`<html>`

`<head>`

`<body>`

Closing tags

`</html>`

`</head>`

`</body>`

```
<!DOCTYPE html>
<html>
  <head>
    <script src="https://aframe.io/releases/1.5.0/aframe.min.js"></script>
  </head>
  <body>
    <a-scene>
      <a-box position="-1 0.5 -3" rotation="0 45 0" color="#4CC3D9"></a-box>
      <a-sphere position="0 1.25 -5" radius="1.25" color="#EF2D5E"></a-
sphere>
      <a-cylinder position="1 0.75 -3" radius="0.5" height="1.5"
color="#FFC65D"></a-cylinder>
      <a-plane position="0 0 -4" rotation="-90 0 0" width="4" height="4"
color="#7BC8A4"></a-plane>
      <a-sky color="#ECECEC"></a-sky>
    </a-scene>
  </body>
</html>
```

```
<!DOCTYPE html>
<html>
  <head>
    <script src="https://aframe.io/releases/1.5.0/aframe.min.js"></script>
  </head>
  <body>
    <a-scene>
      <a-box position="-1 0.5 -3" rotation="0 45 0" color="#4CC3D9"></a-box>
      <a-sphere position="0 1.25 -5" radius="1.25" color="#EF2D5E"></a-
sphere>
      <a-cylinder position="1 0.75 -3" radius="0.5" height="1.5"
color="#FFC65D"></a-cylinder>
      <a-plane position="0 0 -4" rotation="-90 0 0" width="4" height="4"
color="#7BC8A4"></a-plane>
      <a-sky color="#ECECEC"></a-sky>
    </a-scene>
  </body>
</html>
```

```
<!DOCTYPE html>
```

```
<html>
  <head>
    <script src="https://aframe.io/releases/1.5.0/aframe.min.js"></script>
  </head>
  <body>
    <a-scene>
      <a-box position="-1 0.5 -3" rotation="0 45 0" color="#4CC3D9"></a-box>
      <a-sphere position="0 1.25 -5" radius="1.25" color="#EF2D5E"></a-
sphere>
      <a-cylinder position="1 0.75 -3" radius="0.5" height="1.5"
color="#FFC65D"></a-cylinder>
      <a-plane position="0 0 -4" rotation="-90 0 0" width="4" height="4"
color="#7BC8A4"></a-plane>
      <a-sky color="#ECECEC"></a-sky>
    </a-scene>
  </body>
</html>
```

```
<!DOCTYPE html>
<html>
  <head>
    <script src="https://aframe.io/releases/1.5.0/aframe.min.js"></script>
  </head>
  <body>
    <a-scene>
      <a-box position="-1 0.5 -3" rotation="0 45 0" color="#4CC3D9"></a-box>
      <a-sphere position="0 1.25 -5" radius="1.25" color="#EF2D5E"></a-
sphere>
      <a-cylinder position="1 0.75 -3" radius="0.5" height="1.5"
color="#FFC65D"></a-cylinder>
      <a-plane position="0 0 -4" rotation="-90 0 0" width="4" height="4"
color="#7BC8A4"></a-plane>
      <a-sky color="#ECECEC"></a-sky>
    </a-scene>
  </body>
</html>
```

Click on each of the tag icons to learn the basic HTML code.

The code shows the default basic scene presented by A-Frame which you can access by clicking on the A-Frame Basic Scene icon.

This scene shows several a-frame elements that are basic geometries (sphere, box, plane).

## 2. HTML language

### 2.1.1. <!DOCTYPE html>

This tag is the initial tag of an HTML document that tells the browser the version you are working with and is necessary to correctly process the document's code.

### 2.1.2. <html> tag

Starts the HTML document and collects all the content that makes up a web page.

Within the <html> tag, the <head> tag and the <body> tag must appear.

```
<html>...</html>
```

i

```
<!DOCTYPE html>
<html>
  <head>
    <script src="https://aframe.io/releases/1.5.0/aframe.min.js"></script>
  </head>
  <body>
    <a-scene>
      <a-box position="-1 0.5 -3" rotation="0 45 0" color="#4CC3D9"></a-box>
      <a-sphere position="0 1.25 -5" radius="1.25" color="#EF2D5E"></a-
sphere>
      <a-cylinder position="1 0.75 -3" radius="0.5" height="1.5"
color="#FFC65D"></a-cylinder>
      <a-plane position="0 0 -4" rotation="-90 0 0" width="4" height="4"
color="#7BC8A4"></a-plane>
      <a-sky color="#ECECEC"></a-sky>
    </a-scene>
  </body>
</html>
```

## 2. HTML language

### 2.1.3. <head> tag

The <head> tag contains the lines of code necessary for our web page to function and which are not displayed visually. It contains metadata such as the title of the page, links to style sheets, scripts, etc.

For the elaboration of an a-frame environment, it is necessary to add inside <head> the necessary script to inform the browser that we are working in a virtual a-frame environment.

<head>...</head>

```
<!DOCTYPE html>
<html>
  <head>
    <script src="https://aframe.io/releases/1.5.0/aframe.min.js"></script>
  </head>
  <body>
    <a-scene>
      <a-box position="-1 0.5 -3" rotation="0 45 0" color="#4CC3D9"></a-box>
      <a-sphere position="0 1.25 -5" radius="1.25" color="#EF2D5E"></a-
sphere>
      <a-cylinder position="1 0.75 -3" radius="0.5" height="1.5"
color="#FFC65D"></a-cylinder>
      <a-plane position="0 0 -4" rotation="-90 0 0" width="4" height="4"
color="#7BC8A4"></a-plane>
      <a-sky color="#ECECEC"></a-sky>
    </a-scene>
  </body>
</html>
```

## 2. HTML language

### 2.1.4. <body> tag

Inside the <body> tag will be all the visible content on our website.

When designing an a-frame environment, it is necessary to add the <a-scene> tag inside <body>, as shown in the example:

```
<body>...</body>
```

Inside the <a-scene> tag will go all the elements that will appear in our virtual scene.

```
<!DOCTYPE html>
<html>
  <head>
    <script src="https://aframe.io/releases/1.5.0/aframe.min.js"></script>
  </head>
  <body>
    <a-scene>
      <a-box position="-1 0.5 -3" rotation="0 45 0" color="#4CC3D9"></a-box>
      <a-sphere position="0 1.25 -5" radius="1.25" color="#EF2D5E"></a-
sphere>
      <a-cylinder position="1 0.75 -3" radius="0.5" height="1.5"
color="#FFC65D"></a-cylinder>
      <a-plane position="0 0 -4" rotation="-90 0 0" width="4" height="4"
color="#7BC8A4"></a-plane>
      <a-sky color="#ECECEC"></a-sky>
    </a-scene>
  </body>
</html>
```

## 2. HTML language

### 2.2. Composition HTML tags

We have already seen that html tags have an opening and a closing tag.

Within the opening tag you can add **attributes** to the a-frame elements themselves to give them a set of properties or **values**. The attributes are added before closing the opening tag with the symbol (>).

The following example is a line of code to add a box (a-box) to a virtual scene with attributes and their respective values:

The values (shown in green in the example) must always be enclosed in quotation marks.

Attributes are shown in yellow, values in green and labels in blue.

In this example all attributes have a value assigned to them, but in some cases, there are attributes that do not require a value to be assigned to them.

### 3. A-Frame. Get to know the platform

To start working with A-Frame it is necessary to have access to the platform (<https://aframe.io/>). In this web is where we are going to find all the necessary documentation to develop our basic scene.

Web access

Access to documentation

How to search for elements?

Example a-box

Basic a-box code line

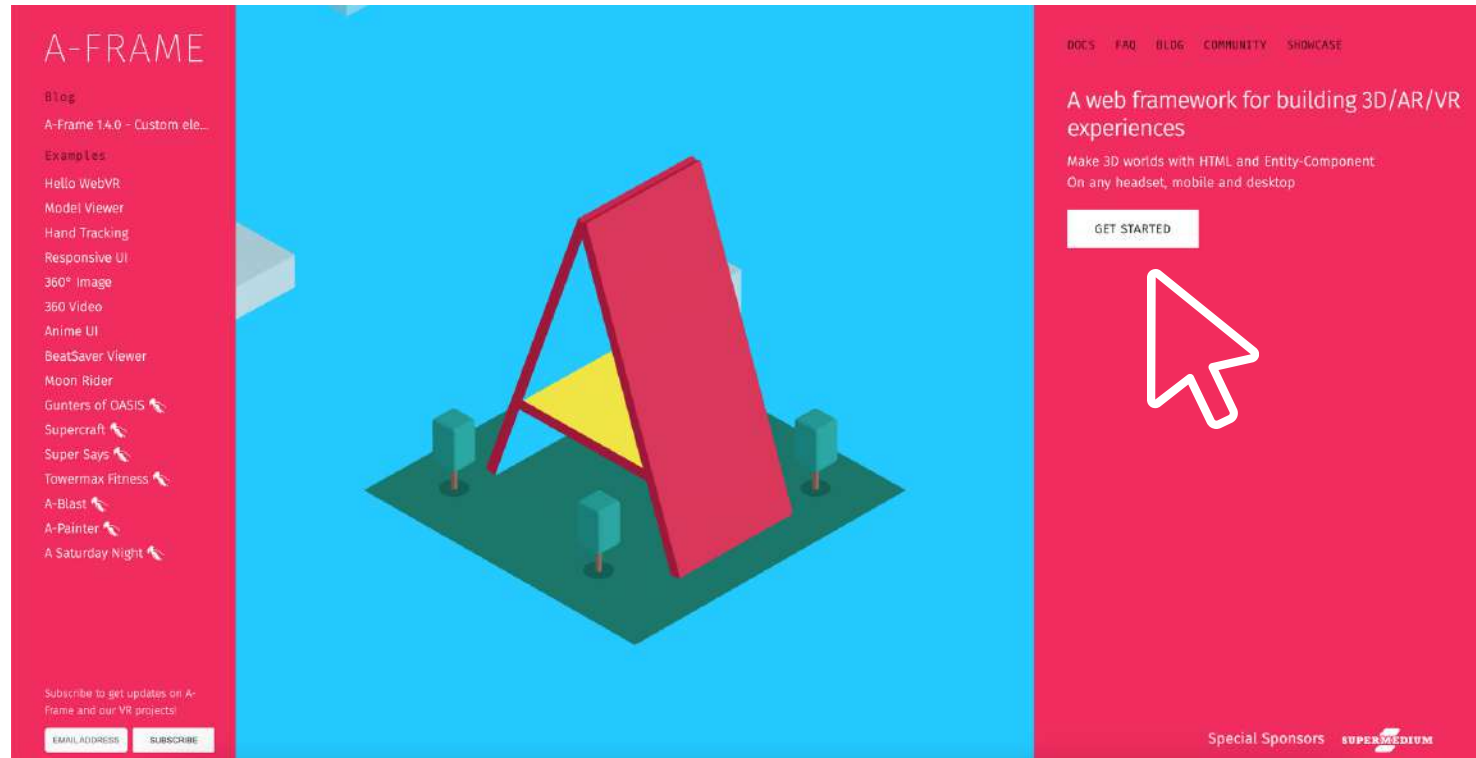

a-box attributes

Once we enter the website, we have to click on "Get Started" to access all the documentation.

In this window we find all the documentation related to the box element.

## <a-box>

The box primitive creates shapes such as boxes, cubes, or walls.

### Example

```
<a-assets>  
  
</a-assets>  
  
<!-- Basic box. -->  
<a-box color="tomato" depth="2" height="4" width="0.5"></a-box>  
  
<!-- Textured box. -->  
<a-box src="#texture"></a-box>
```

### Attributes

Attribute	Component Mapping	Default Value
ambient-occlusion-map	material.AmbientOcclusionMap	None
ambient-occlusion-map-intensity	material.AmbientOcclusionMapIntensity	1
ambient-occlusion-texture-offset	material.AmbientOcclusionTextureOffset	0 0
ambient-occlusion-texture-repeat	material.AmbientOcclusionTextureRepeat	1 1
color	material.color	#FFF
depth	geometry.depth	1
displacement-bias	material.displacementBias	0.5
displacement-map	material.displacementMap	None
displacement-scale	material.displacementScale	1
displacement-texture-offset	material.displacementTextureOffset	0 0

## Introduction

### Getting Started

A-Frame can be developed from a plain HTML file without having to install anything. A great way to try out A-Frame is to [remix the starter example on Glitch](#), an online code editor that instantly hosts and deploys for free. Alternatively, create an `.html` file and include A-Frame in the `<head>`:

```
<html>
  <head>
    <script src="https://aframe.io/releases/1.5.0/aframe.min.js"></script>
  </head>
  <body>
    <a-scene>
      <a-box position="-1 0.5 -3" rotation="0 45 0" color="#4CC3D9"></a-box>
      <a-sphere position="0 1.25 -5" radius="1.25" color="#EF2D5E"></a-sphere>
      <a-cylinder position="1 0.75 -3" radius="0.5" height="1.5" color="#4CC3D9"></a-cylinder>
      <a-plane position="0 0 -4" rotation="-90 0 0" width="4" height="4" color="#4CC3D9"></a-plane>
      <a-sky color="#E0E0E0"></a-sky>
    </a-scene>
  </body>
</html>
```

The [Installation](#) page provides more options for getting started with A-Frame. To get started learning A-Frame, check out [A-Frame School](#) for visual step-by-step lessons to complement the documentation.

# Exercise

Creation of the first basic A-  
Frame scene with Glitch

In this exercise we will learn how to use the Glitch platform to create virtual scenes using A-Frame.

Utilizaremos el ejemplo básico que A-Frame proporciona.

*During the development of the course we will design step by step, in the practical exercises of each module, a virtual museum room to which we will integrate elements such as images, videos, 3D objects...*

# Start working

To develop our first virtual scene we will use the online platform Glitch (<https://glitch.com/>).

1

Registration

2

Creation of a  
project

3

Knowing the  
interface

4

Code preview

5

Preview pane

6

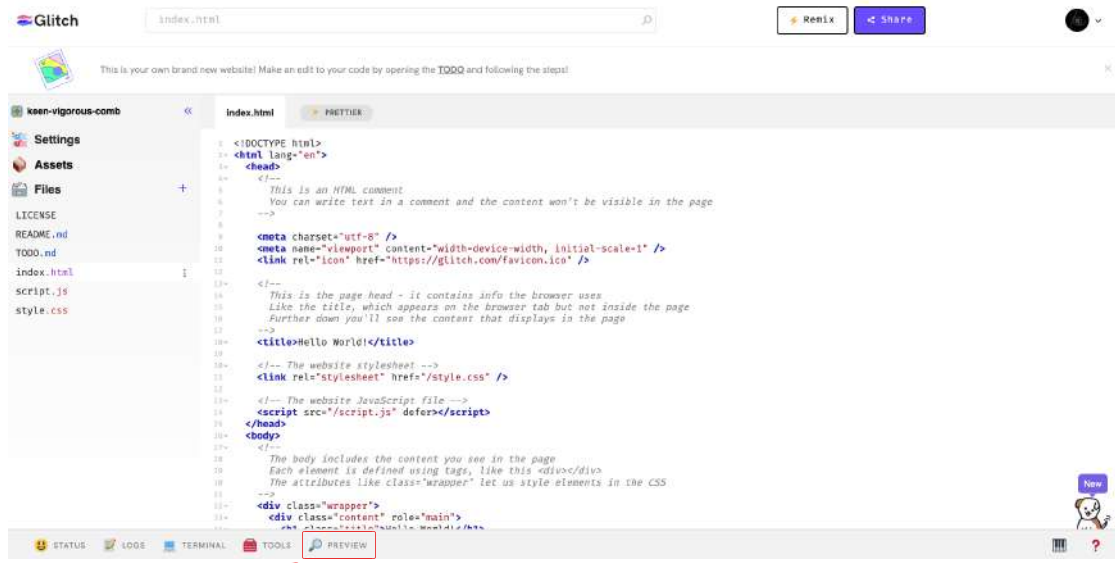

A-Frame Code

7

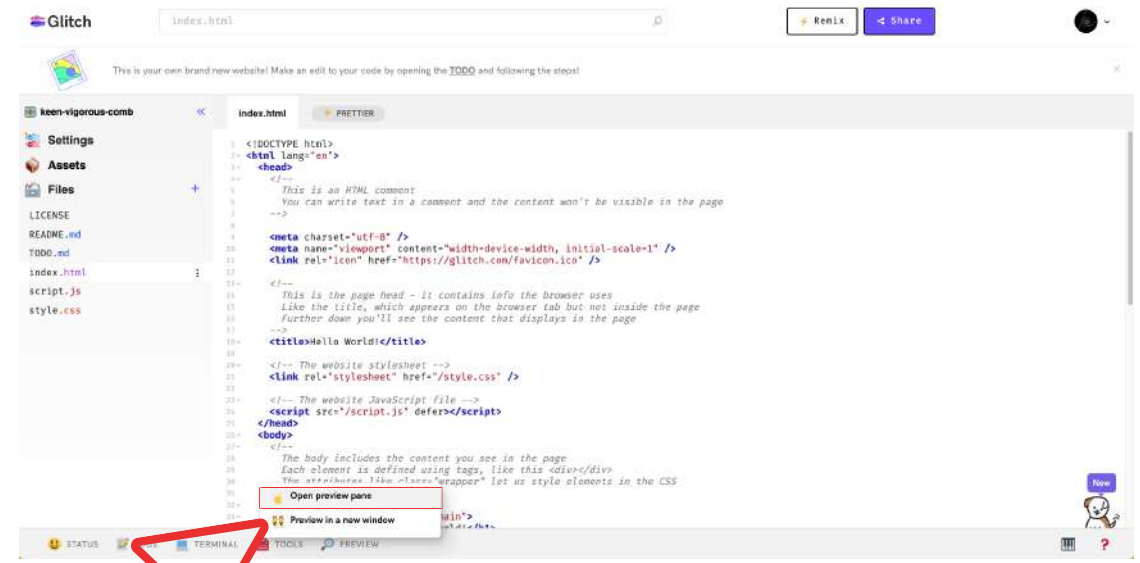

A-Frame code  
preview

The index.html tab allows us to work with code and to be able to visualize what we are doing at the moment. To do this, we have to click on "Preview" and then on "Open preview pane"

1

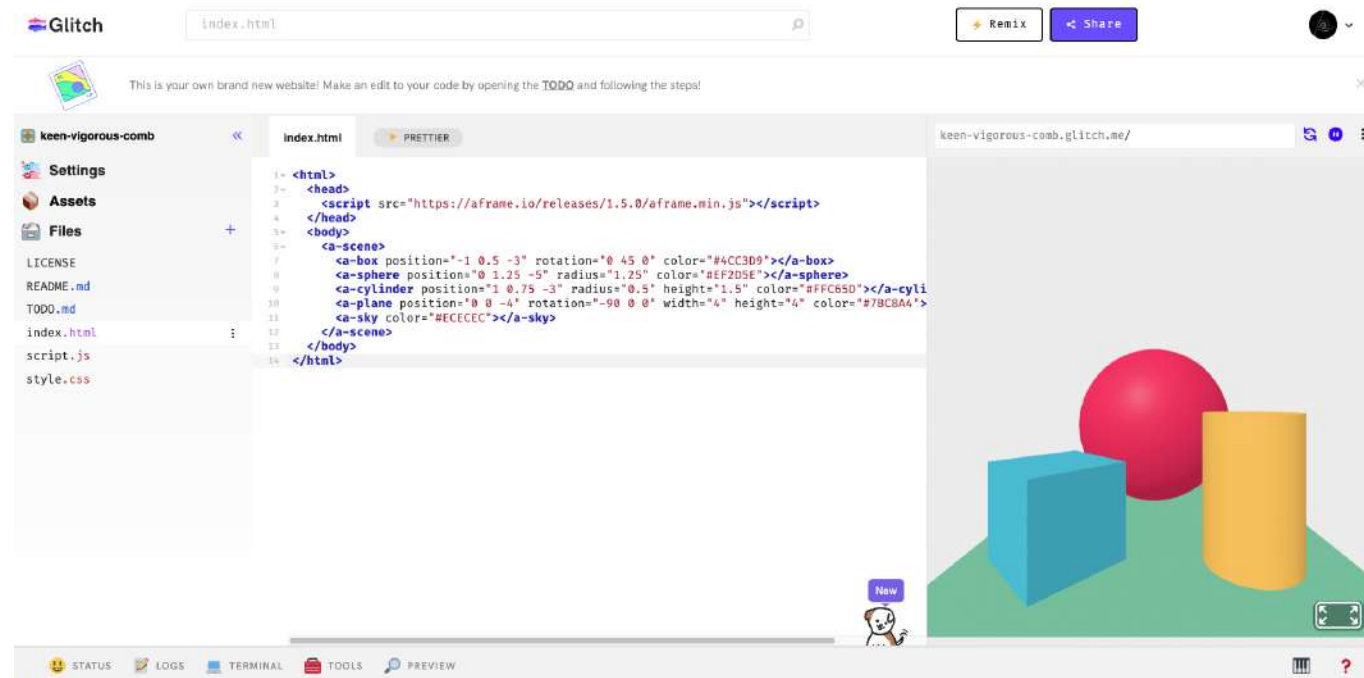

2

The code that we have copied, we will paste it in the project that we have created previously in glitch (in the tab index.html).

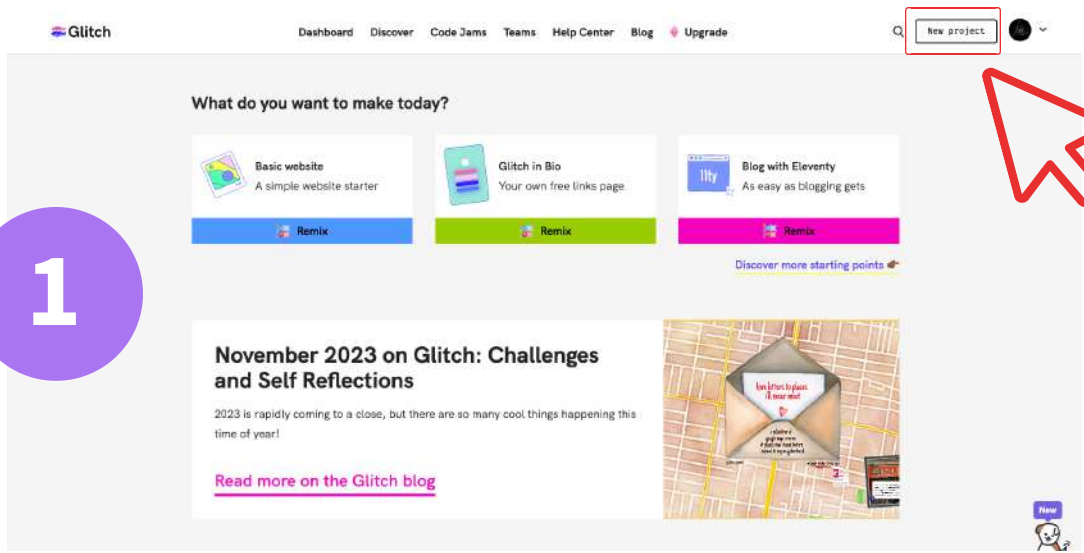

The result has to be the following:

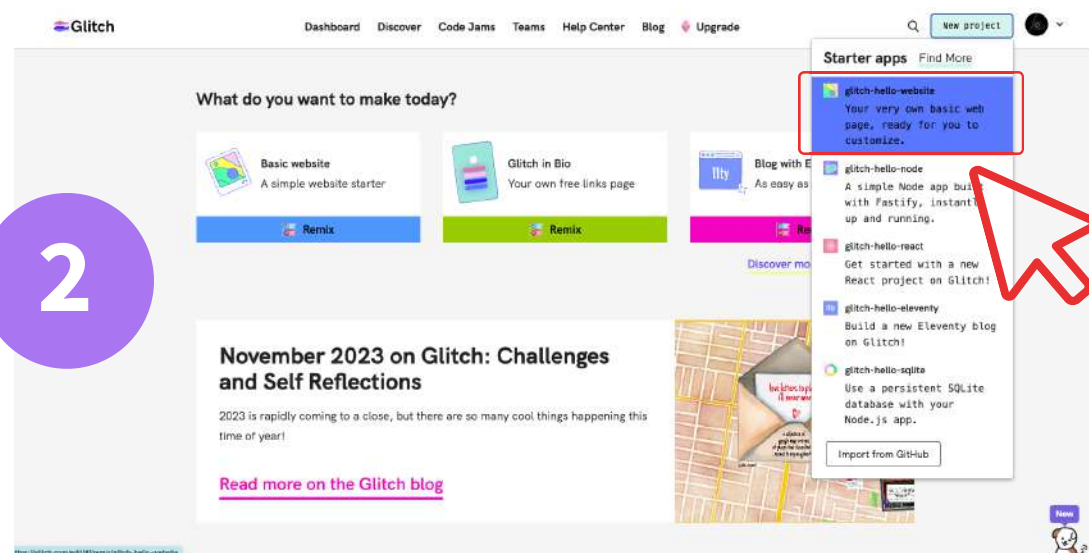

Once registered, to start working on a project we have to click on "New project" and then on "glitch-hello-website".

1

2

A preview tab of the code we are creating will appear on the right:

The screenshot shows the Glitch editor interface. On the left, there is a sidebar with 'Settings', 'Assets', and 'Files' sections. The 'Files' section lists 'LICENSE', 'README.md', 'TODO.md', 'index.html', 'script.js', and 'style.css'. The main editor area shows the code for 'index.html' with line numbers 1 through 31. The code includes HTML boilerplate with a title 'Hello World!'. On the right, a preview window shows the rendered output: a green background with the text 'Hello World!' in blue, and a polaroid-style illustration of a landscape with a sun, hills, and a blue circle. The preview window is highlighted with a red border.

To start working on an A-Frame scene, we have to copy the default code provided by the A-Frame platform and paste it into our glitch project.

The screenshot shows the A-Frame documentation website. On the left is a navigation sidebar with links for 'DOCS', 'BLOG', 'COMMUNITY', 'SHOWCASE', 'GITHUB', 'SLACK', 'DISCORD', 'NEWSLETTER', and 'ASK A QUESTION'. Below this is a 'VERSION' dropdown set to '1.5.0'. The main content area is titled 'Introduction' and 'Getting Started'. It contains a paragraph explaining that A-Frame can be developed from a plain HTML file and provides a link to a starter example on Glitch. Below the text is a code block containing the following HTML code:

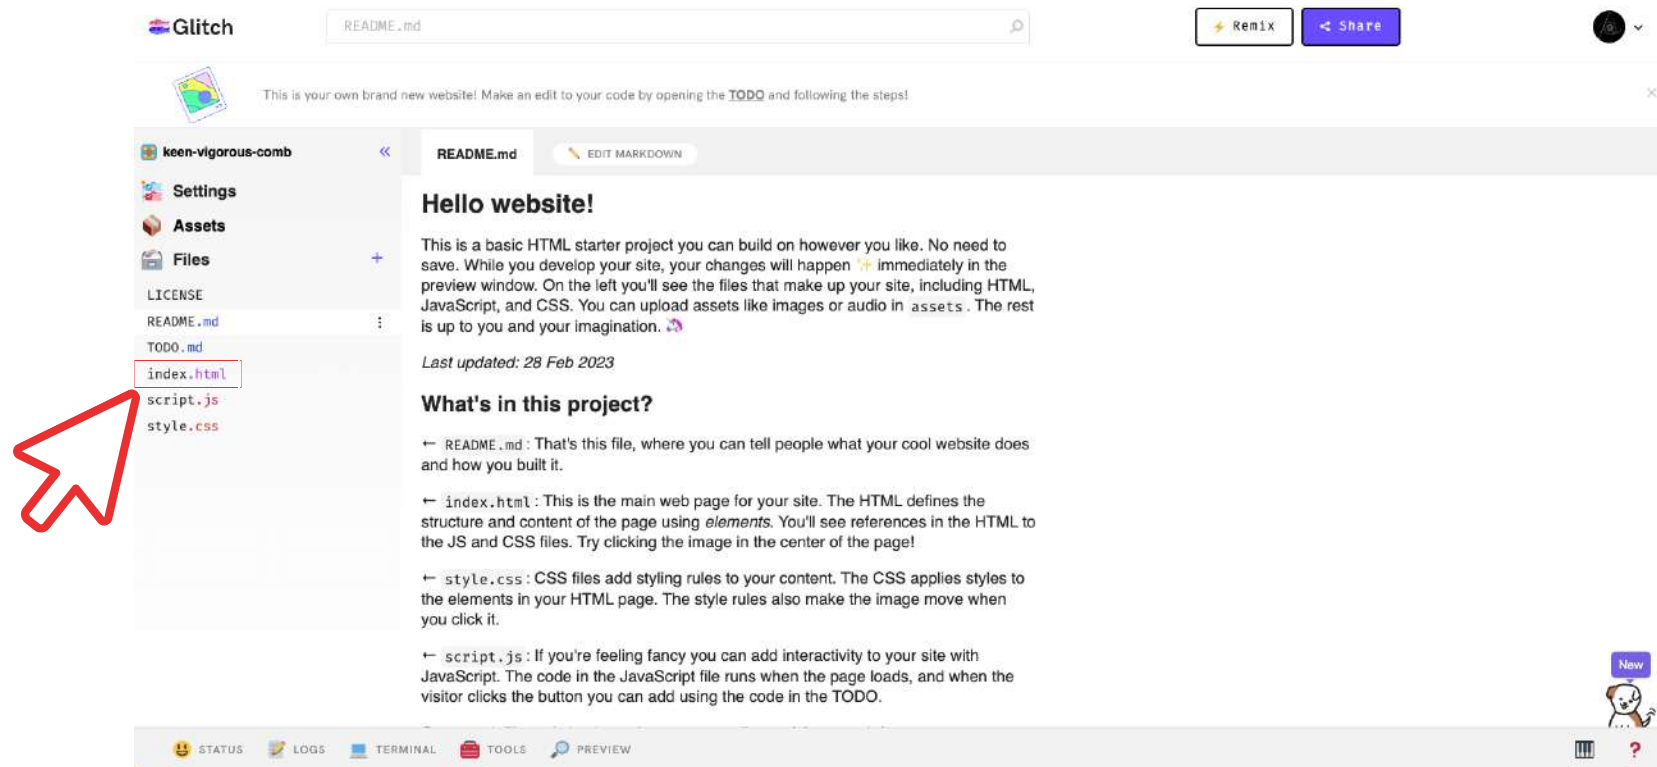

```
<html>
<head>
<script src="https://aframe.io/releases/1.5.0/aframe.min.js"></script>
</head>
<body>
<a-scene>
<a-box position="1 0 5 -3" rotation="0 45 0" color="#ACC3D9"></a>
<a-sphere position="0 1.25 -5" radius="1.25" color="#E9705E"></a>
<a-cylinder position="1 0.75 -3" radius="0.5" height="1.5" color="
<a-plane position="0 0 -6" rotation="-90 0 0" width="4" height="4
<a-sky color="#E9E9E9"></a-sky>
</a-scene>
</body>
</html>
```

Below the code block, there is a paragraph stating: "The Installation page provides more options for getting started with A-Frame. To get started learning A-Frame, check out A-Frame School for visual step-by-step lessons to complement the documentation." Below this is a section titled "What is A-Frame?" with a small image of a 3D scene.

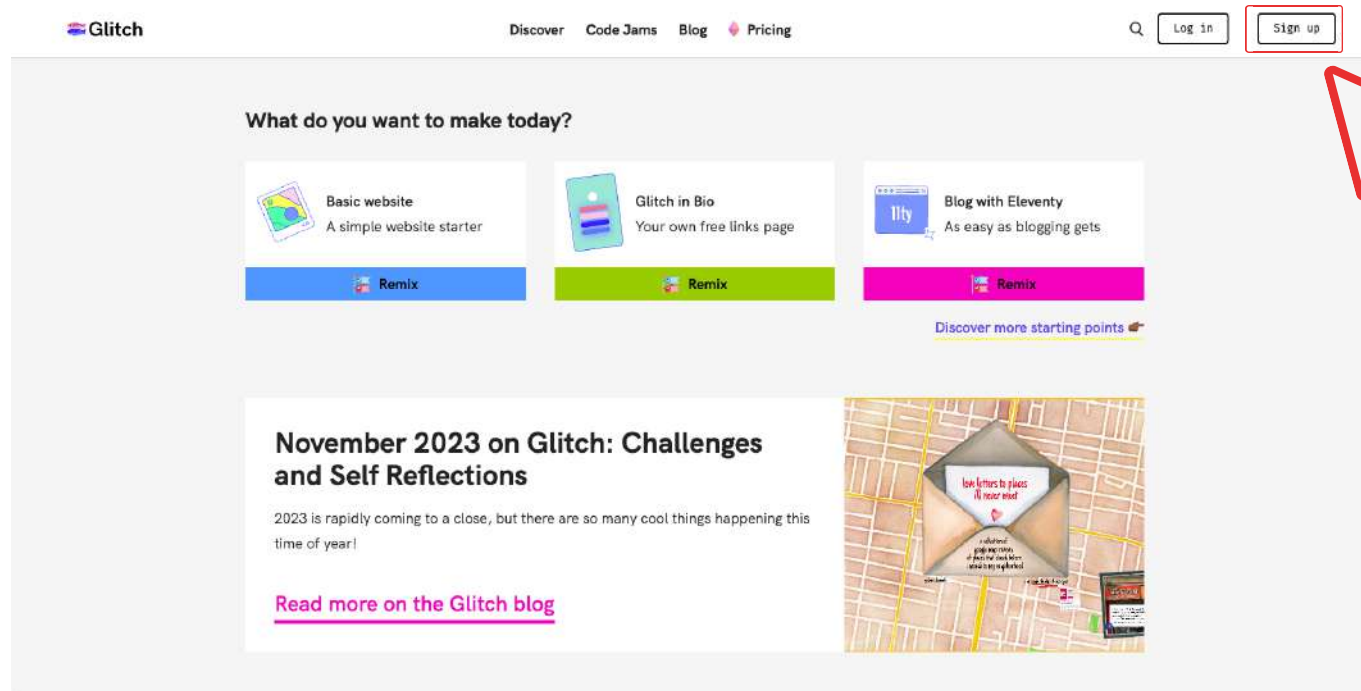

Once a new project has been created, the following interface will appear:

To start working with code we have to click on **index.html**  
(As the course progresses we will discover what the rest of the tabs are).

Once we enter Glitch.com, we have to create an account in "Sign up" to start working.

# Add your first box

In the theoretical part we have explained how to add a basic box, let's put it into practice:

1

a-box example

2

Basic a-box code  
line

3

Integrating a-box  
element in Glitch

4

a-box visualization  
added

5

a-box attributes

6

Modifying a-box  
attributes

7

Final results

To see the box we have just added, we can navigate the environment with the arrow keys and the mouse.

The default box is displayed as shown in the image:

The screenshot shows a Glitch editor interface. At the top, there's a search bar with 'index.html' and buttons for 'Remix' and 'Share'. Below that is a message: 'This is your own brand new website! Make an edit to your code by opening the TODO and following the steps!'. The main editor area is split into three parts: a file explorer on the left, a code editor in the middle, and a 3D preview on the right. The file explorer shows a project named 'keen-vigorous-comb' with files like 'LICENSE', 'README.md', 'TODO.md', 'index.html', 'script.js', and 'style.css'. The code editor shows HTML code for an A-Frame scene. Line 12, which contains the code for a red box, is highlighted. The 3D preview shows a scene with a red box, a red sphere, a yellow cylinder, and a green plane. A red mouse cursor is pointing at the red box. At the bottom, there's a status bar with icons for 'STATUS', 'LOGS', 'TERMINAL', 'TOOLS', and 'PREVIEW'.

```
1- <html>
2- <head>
3   <script src="https://aframe.io/releases/1.5.0/aframe.min.js"></script>
4 </head>
5 <body>
6   <a-scene>
7     <a-box position="-1 0.5 -3" rotation="0 45 0" color="#4CC3D9"></a-box>
8     <a-sphere position="0 1.25 -5" radius="1.25" color="#EF2D5E"></a-sphere>
9     <a-cylinder position="1 0.75 -3" radius="0.5" height="1.5" color="#FFC65D"></a-cyli
10    <a-plane position="0 0 -4" rotation="-90 0 0" width="4" height="4" color="#7BC8A4">
11    <a-sky color="#ECECEC"></a-sky>
12    <a-box color="tomato" depth="2" height="4" width="0.5"></a-box>
13  </a-scene>
14 </body>
15 </html>
```

Once copied the line of code, we will paste it in our project in Glitch. Always inside the `<a-scene>` tag, as shown in the image:

The screenshot shows a Glitch project editor interface. At the top, there's a search bar with 'index.html' and buttons for 'Remix' and 'Share'. Below that, a message says 'This is your own brand new website! Make an edit to your code by opening the [TODO](#) and following the steps!'. The main editor area is split into three parts: a file explorer on the left, a code editor in the middle, and a preview window on the right. The file explorer shows a project named 'keen-vigorous-comb' with files like 'LICENSE', 'README.md', 'TODO.md', 'index.html', 'script.js', and 'style.css'. The code editor shows the following HTML code:

```
1 <html>
2 <head>
3 <script src="https://aframe.io/releases/1.5.0/aframe.min.js"></script>
4 </head>
5 <body>
6 <a-scene>
7 <a-box position="-1 0.5 -3" rotation="0 45 0" color="#4CC3D9"></a-box>
8 <a-sphere position="0 1.25 -5" radius="1.25" color="#EF2D5E"></a-sphere>
9 <a-cylinder position="1 0.75 -3" radius="0.5" height="1.5" color="#FFC65D"></a-cyli
10 <a-plane position="0 0 -4" rotation="-90 0 0" width="4" height="4" color="#7BC8A4">
11 <a-sky color="#E0E0E0"></a-sky>
12 <a-box color="tomato" depth="2" height="4" width="0.5"></a-box>
13 </a-scene>
14 </body>
15 </html>
```

The line `<a-box color="tomato" depth="2" height="4" width="0.5"></a-box>` is highlighted with a red box, and a red mouse cursor points to it. The preview window shows a 3D scene with a blue cube, a red sphere, a yellow cylinder, and a green plane. The bottom of the editor has a navigation bar with icons for 'STATUS', 'LOGS', 'TERMINAL', 'TOOLS', and 'PREVIEW'. A blue circular icon with an 'i' is in the bottom left corner.

**1** We will work with the attributes of color, position, width, depth and height:

```
i <!-- Basic box. -->  
<a-box color="tomato" depth="2" height="4" width="0.5"></a-box>
```

**2** We will change the color to a hexadecimal color and the proportions of the box, as shown below:

```
<!-- Caja cambiando atributos -->  
<a-box color="#572634" depth="3" height="3" width="3"></a-box>
```

**3** We add the "position" attribute to our line of code:

```
<!-- Caja cambiando atributos -->  
<a-box color="#572634" depth="1" height="1" width="1" position="0 2.5 -2"></a-box>
```

To see the basic line of code of a box (a-box) we type in the search bar "a-box" (or simply box) to see all the documentation concerning the box element.

## Introduction

### Getting Started

A-Frame can be developed from a plain HTML file without having to install anything. A great way to try out A-Frame is to [remix the starter example on Glitch](#), an online code editor that instantly hosts and deploys for free. Alternatively, create an `.html` file and include A-Frame in the `<head>`:

```
<html>
  <head>
    <script src="https://aframe.io/releases/1.5.0/aframe.min.js"></script>
  </head>
  <body>
    <a-scene>
      <a-box position="-1 0.5 -3" rotation="0 45 0" color="#4CC3D9"></a-box>
      <a-sphere position="0 1.25 -5" radius="1.25" color="#EF2D5E"></a-sphere>
      <a-cylinder position="1 0.75 -3" radius="0.5" height="1.5" color="#4CC3D9"></a-cylinder>
      <a-plane position="0 0 -4" rotation="-90 0 0" width="4" height="4" color="#4CC3D9"></a-plane>
      <a-sky color="#E0E0E0"></a-sky>
    </a-scene>
  </body>
</html>
```

The [Installation](#) page provides more options for getting started with A-Frame. To get started learning A-Frame, check out [A-Frame School](#) for visual step-by-step lessons to complement the documentation.

1.5.0 > PRIMITIVES

## <a-box>

The box primitive creates shapes such as boxes, cubes, or walls.

### Example

```
<a-assets>
  
</a-assets>

<!-- Basic box. -->
<a-box color="tomato" depth="2" height="4" width="0.5"></a-box>

<!-- Textured box. -->
<a-box src="#texture"></a-box>
```

### Attributes

Attribute	Component Mapping	Default Value
ambient-occlusion-map	material.ambientOcclusionMap	None
ambient-occlusion-map-intensity	material.ambientOcclusionMapIntensity	1
ambient-occlusion-texture-offset	material.ambientOcclusionTextureOffset	0 0
ambient-occlusion-texture-repeat	material.ambientOcclusionTextureRepeat	1 1
color	material.color	#FFF
depth	geometry.depth	1
displacement-bias	material.displacementBias	0.5
displacement-map	material.displacementMap	None
displacement-scale	material.displacementScale	1
displacement-texture-offset	material.displacementTextureOffset	0 0

Basic line of code to add the box. we will copy this line of code to paste it in our project in Glitch.

With the box attributes changed, we will obtain the following result:

The screenshot shows a Glitch editor interface. At the top, there's a search bar with "index.html" and buttons for "Remix" and "Share". Below that, a message says "This is your own brand new website! Make an edit to your code by opening the TODO and following the steps!". The main editor area is split into a file explorer on the left and a code editor in the center. The file explorer shows a project named "keen-vigorous-comb" with files like "LICENSE", "README.md", "TODO.md", "index.html", "script.js", and "style.css". The code editor shows the following HTML code:

```
1 <html>
2 <head>
3   <script src="https://aframe.io/releases/1.5.0/aframe.min.js"></script>
4 </head>
5 <body>
6   <a-scene>
7     <a-box position="-1 0.5 -3" rotation="0 45 0" color="#4CC3D9"></a-box>
8     <a-sphere position="0 1.25 -5" radius="1.25" color="#EF2D5E"></a-sphere>
9     <a-cylinder position="1 0.75 -3" radius="0.5" height="1.5" color="#FFC65D"></a-cyli
10    <a-plane position="0 0 -4" rotation="-90 0 0" width="4" height="4" color="#7BC8A4">
11    <a-sky color="#ECECEC"></a-sky>
12 </a-scene>
13 <!-- Caja cambiando atributos -->
14 <a-box color="#572634" depth="1" height="1" width="1" position="0 2.5 -2"></a-box>
15 </a-scene>
16 </body>
17 </html>
```

The 3D scene on the right shows a red sphere in the center, a yellow cylinder to its right, a blue cube to its left, and a dark brown inverted pyramid above it. The scene is set on a green ground plane. At the bottom of the editor, there are tabs for "STATUS", "LOGS", "TERMINAL", "TOOLS", and "PREVIEW".

To remember how to find the documentation on how to add the basic a-box geometry in a-frame, see point **3. A-Frame.**  
**Get to know the platform**

Going back to the a-box documentation on the a-frame website, we can find all the attributes to work with the box element.

### Attributes

In this section we will find all the attributes that we can add to the a-box element

Attribute	Component Mapping	Default Value
ambient-occlusion-map	material.AmbientOcclusionMap	None
ambient-occlusion-map-intensity	material.AmbientOcclusionMapIntensity	1
ambient-occlusion-texture-offset	material.AmbientOcclusionTextureOffset	0 0
ambient-occlusion-texture-repeat	material.AmbientOcclusionTextureRepeat	1 1
color	material.color	#FFF
depth	geometry.depth	1
displacement-bias	material.displacementBias	0.5
displacement-map	material.displacementMap	None
displacement-scale	material.displacementScale	1
displacement-texture-offset	material.displacementTextureOffset	0 0
displacement-texture-repeat	material.displacementTextureRepeat	1 1

## Next steps

In the following modules of the course we will learn how to work and create rooms using boxes.

In the following example you can see a preview of how to work with boxes for the creation of virtual rooms:
